Chau Ngoc Anh Tri

Software Engineer - Frontend Developer

0917280180 anhtri22303@gmail.com www.linkedin.com/in/anhtri Ho Chi Minh, VN

CAREER GOAL

A dedicated Software Engineer specializing in Front-End & Mobile Development (Next.js, React Native, TypeScript) with a strong foundation in UI/UX principles and basic DevOps workflows. Eager to leverage my technical skills and fluent English proficiency to build high-performance, scalable web/mobile solutions while contributing to dynamic, professional engineering environments.

EDUCATION

FPT University HCM 2023 - 2026

Software Engineering

GPA: 2.9/4

TECHNICAL SKILLS

Frontend	• TypeScript, JavaScript (ES6+), NextJS / ReactJS, HTML, CSS, Responsive Design, Expo / React Native
Backend	• Supabase (Auth, Database, Storage), Java (Spring Boot, Hibernate), REST API integration, CRUD, Authentication (JWT, Interceptors)
Database	• PostgreSQL, MySQL, MongoDB, Upstash Redis (Caching & Rate Limiting)
DevOps	• Docker, Basic CI/CD with GitHub Actions, Vercel deployment automation
Other	• Git/Github, Figma, Draw.io

PROJECTS

CAPSTONE PROJECT **UniClub - Student Club Loyalty & Membership System** Sep 2025 - Dec 2025

Frontend (Web & Mobile) Developer & DevOps (Team size: 4 member)

Purpose: Developed a cross-platform ecosystem (Web & Mobile) to digitize manual university club management, streamlining user check-ins, event workflows, and membership approvals.

Web & Mobile Architecture: Built secure, dynamic role-based dashboards (Admin, Staff, Leader, Student) by designing 90+ reusable cross-platform components using **Next.js 14** (Web) and **React Native / Expo 53** (Mobile).

Core Features & Implementation:

- Implemented real-time **QR code scanning & generation** on mobile for seamless student check-in/out and attendance tracking.
- Designed point-exchange mechanics and automated membership workflows, **collaborating closely with the Backend team to integrate 30+ RESTful APIs**.
- Optimized data fetching, state persistence, and cross-platform performance using **TanStack Query custom hooks** and **Zustand**.
- Handled secure token rotation and centralized error handling via **Axios interceptors**.
- Significantly mitigated front-end bugs and ensured code reliability by implementing 188+ Jest/React Testing Library (RTL) unit tests.

Technologies: Next.js 14, React Native, Expo 53, TypeScript, PostgreSQL, Upstash Redis, TanStack Query, Zustand, Tailwind CSS, NativeWind, Jest/RTL, Docker, Java Spring Boot Backend.

GlowCorner - Skincare E-Commerce Platform Feb 2025 - Apr 2025

Frontend Developer & DevOps

Purpose: Developed a responsive e-commerce platform designed to personalize the skincare shopping experience through data-driven product recommendations.

System Architecture: Built an optimized, multi-role web application featuring distinct dashboards (Manager, Staff, Customer) spanning 60+ dynamic sub-routes using **Next.js 14** and **Shadcn UI**.

Core Features & Implementation:

- Integrated 14 API modules (80+ endpoints) for catalog search, shopping cart management, **Stripe payment checkout**, and an interactive **skin-type quiz**.
- Handled secure user authentication, product storage, and real-time backend services by leveraging **Supabase**.
- Implemented secure **JWT token rotation** and persistent authentication states utilizing **Axios interceptors** with centralized error handling.
- Collaborated closely with the Backend team to integrate 30+ RESTful APIs built on Java Spring Boot, ensuring seamless cross-platform data synchronization.

Performance & Optimization:

- Accelerated data fetching and page load times by caching heavy catalog queries with **Upstash Redis** and **TanStack Query**.
- Enhanced SEO rankings and front-end efficiency through **Vercel deployment automation**, server-side pagination, and dynamic filtering.

Technologies: Next.js 14, TypeScript, Upstash Redis, TanStack Query, Tailwind CSS, Shadcn UI, Stripe API, Vercel, Java Spring Boot.

CERTIFICATIONS

User Experience Research and Design – Coursera	May 20, 2025
Claude Code 101 & Claude Code in Action – Anthropic Courses	2026

ACTIVITIES

Seminar: Cloud Infrastructure & OS On AWS (Participant) — Oct 2025

- Gained insights into AWS core infrastructure, virtualization (Nitro System), and practical deployment of containerized applications using EC2 and ECS Fargate.

Webinar: Generative AI & The Future of Software Development (Participant) — Feb 2024

- Explored the integration of AI tools (GitHub Copilot, LLMs) into the software development lifecycle to enhance coding efficiency and automate testing.
